## REASONS FOR ALLOWANCE

1. Regarding the claimed terms, the Examiner notes that a “general term must be understood in the context in which the inventor presents it.” *In re Glaug* 283 F.3d 1335, 1340, 62 USPQ2d 1151, 1154 (Fed. Cir. 2002). Therefore the Examiner must interpret the claimed terms as found on pages 1-33 of the specification. Clearly almost all the general terms in the claims may have multiple meanings. So where a claim term “is susceptible to various meanings, . . . the inventor’s lexicography must prevail . . .” *Id.* Using these definitions for the claims, the claimed invention was not reasonably found in the prior art.

2. The closest prior art Fisher et al discloses a method/system for processing and transmitting electronic auction information. JP358181396 A, Gohara et al discloses a clock synchronizing system in digital subscriber line.

3. However, neither Fisher nor Gohara singularly or in combination discloses the recited feature: As per claims 9 and 40“ a subscriber request component configured to receive requests from the plurality of subscribers and modify (with the requests) the information stored in the information tracking component in accordance with the requests, wherein the subscriber request component is configured to receive a request to reserve a particular asset, wherein the publishing component is further configured to identify one or more of the plurality of subscribers affected by the modification to the information stored in the information tracking component, and to communicate, to the one or more of the plurality of subscribers affected by the modification, the information

as modified, and to communicate to selected ones of the plurality of subscribers a notification that the asset is reserved and not available for sale”.

4. As noted in the original specification, the claimed "components" are not necessarily software per se.
